

ABHIJIT UPADHYAY

SOFTWARE ENGINEER

Sydney, NSW | abhijitupadhyay03@gmail.com | github.com/Nutty1704 | linkedin.com/in/upadhyay-abhijit/

Software Engineer building backend, platform, and full-stack systems with Go, Python, TypeScript, AWS, Kubernetes, Terraform, and CI/CD.

SKILLS

Languages: Go, Python, TypeScript, SQL
Cloud & Platform: AWS, Kubernetes, Terraform, Buildkite
Backend & Data: FastAPI, PostgreSQL, Kafka, Node.js
Engineering: CI/CD, Datadog, OAuth, React

PROFESSIONAL EXPERIENCE

Rokt — Software Engineer

Sep 2025–Aug 2026

- Shipped production changes to a Go auction module processing millions of transactions daily while maintaining p99 latency below 99 ms.
- Solely led the design and end-to-end delivery of a self-service auction experimentation platform, enabling non-technical users to run experiments independently; built its Kubernetes, RDS PostgreSQL, Buildkite CI/CD, FastAPI, React/TypeScript, and Kubeflow foundations.
- Migrated 13 production Kubeflow Pipelines from v1 to v2 through staged cutovers, legacy retirement, and CI enforcement.
- Built auction anomaly detection and operational telemetry, with monitoring and dashboards to support investigation and decision-making.
- Led a root-cause investigation that improved simulator-to-production output agreement from approximately 95% to 99.9%, and created a diagnostic notebook to streamline future disparity investigations.

Freelance (via Vicky's Classroom) — Private Tutor

Nov 2023–Feb 2024; Nov 2024–Feb 2025

- Delivered tailored mathematics instruction to six middle-school students, adapting teaching strategies to individual learning styles.
- Created and assessed more than 50 custom problem sets to reinforce understanding and track student progress.

Chhattisgarh Agro Biotech Lab — Packaging Supervisor

Aug 2021–May 2022

- Managed more than 50 packaging cycles with 96% on-time completion by optimising daily workflows and team coordination.
- Conducted quality assurance on more than 80 product batches, identifying and preventing packaging defects before dispatch.

PROJECTS

Job Search Assistance Pipeline

Aug 2026

GitHub: <https://github.com/Nutty1704/job-board>

- Built a centralized job board that ingests software-engineering roles from job portals and normalises them into a consistent job-listing format.
- Designed an event-driven AWS workflow using Lambda, SQS, DynamoDB, S3, and EventBridge Scheduler for ingestion, job matching, and resume generation.
- Provisioned the pipeline with Terraform, least-privilege IAM roles, versioned S3 artifact storage, and Buildkite OIDC CI/CD workflows for testing, packaging, publishing, planning, and approved deployment.

TasteMonash – UniEats App

Feb 2025–Jun 2025

GitHub: <https://github.com/Nutty1704/eprp-frontend>, <https://github.com/Nutty1704/eprp-backend>

- Developed a full-stack restaurant-discovery platform with anonymous reviews, business management, and role-based access control for the Monash University dining community.
- Implemented REST APIs with Express.js and MongoDB, including database indexing, pagination, and node-cron scheduled jobs for deal expiration.
- Built a responsive React and Tailwind CSS frontend with Zustand state management, PassportJS authentication, cloud image storage, and error handling across the MERN stack.

Inbox Automation & Alert System

Jul 2025

GitHub: <https://github.com/Nutty1704/email-inbox-automation>

- Built a Python script using imaplib and Gemini to fetch Gmail threads, categorise emails, and store detailed data and inbox summaries in PostgreSQL.
- Automated daily ingestion with GitHub Actions and deployed the bot on a DigitalOcean droplet with CI/CD.
- Reduced daily inbox triage time by 50% by automating email parsing, summarisation, and notification workflows.

EDUCATION

Bachelor of Computer Science — Monash University

Jul 2022– Jul 2025

GPA: 3.875/4

ADDITIONAL INFORMATION

- Speaker at GDG (Google Developer Groups) Melbourne (July 2025)
